ORGANISATIONAL CARBON FOOTPRINT: ALUMINIUM BILLET MANUFACTURING

Intelesoft SA has calculated the carbon footprint of its activity with the following scopes, following the Greenhouse Gas Protocol Corporate Standard (GHG Protocol) and with the help of the specialized consultancy Euro-Funding Environmental (Report MTEC(HCO-INTELESOFT2022)v04):

- Scope 1: Direct GHG Emissions
- Scope 2: Indirect GHG emissions caused by imported energy.
- Scope 3: Other indirect emissions (Categories 1, 3, 4, 5, 6, 7, 9, 12).

The Intelesoft Emissions ratio in 2022 is 3,038 tones of CO2 per ton of billet produced.

No exclusions have been made for the calculation of this carbon footprint.

The carbon footprint is used by INTELESOFT as a sustainability indicator and allows us to quantify the impact our organization has on the environment and our contribution to climate change.
